

1. DESIGN STANDARD:
 - 1.1 Provide a complete fuel oil piping. Comply with the equipment manufacturers requirements and recommendations.
2. PRODUCT STANDARD:
 - 2.1 Use schedule 40 black steel pipe with screwed fittings only.
 - 2.2 Specify dielectric unions at connections between dissimilar metals.
3. PERFORMANCE STANDARD:
 - 3.1 Install per recommendations of manufacturer.
 - 3.2 Test in accordance with applicable Code. Coordinate all tests with Rice University's Project Manager.
 - 3.3 Test fuel oil lines for tightness prior to connection to equipment.
 - 3.4 Specify flexible connections on driven equipment.
